## **Executive summary**

In this report we will document the planning and the progress for the individual tasks of the third delivery of the project. Cost estimation will be included.

## **Revision Table**

| Date       | Version | Description of the changes                         | Sprint |

#### Introduction

The third delivery comprises ten tasks in total, with six of them categorized as optional. Three of them are involve writing reports, one of them is for fixing some details of the previous delivery and all the rest entail implementing functional requirements.

Since this report exclusively refers to the individual tasks of student number 1, myself, I am attributed all possible roles. Also, attendance hours will be left for the group planning and progress report.

The team has decided to keep a GitHub project exclusively for the group tasks, so we have created one GitHub project for each individual member and their own tasks; that's why only my individual tasks will be seen in the screenshots of this report.

The content of this report is organized in two chapters: the planning chapter and the progress chapter.

#### The planning chapter includes:

- A listing with the tasks that have been performed to fulfil the requirements, for each task, providing the title, succinct description, assignee and role/s, planned time, and actual time.
- Some screenshots of different moments of the delivery development.
- A budget with the total estimated cost required to carry the previous tasks out. This includes the number of estimated hours (with details per role), the personnel cost (with details per role), the amortization cost, and the totals.

#### The progress chapter includes:

- My progress record, including an analysis of my performance indicators.
- A succinct description of the arisen conflicts and how I have addressed them.
- A comparison between the cost estimated in the previous planning and the real cost after finishing the deliverable. This includes the number of hours spent (with details per role), the personnel cost (with details per role), the amortization cost, and the totals.

#### Contents

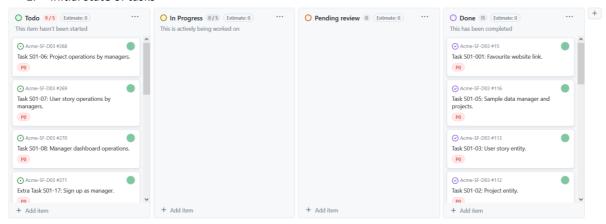

## Planning

#### Listing by tasks

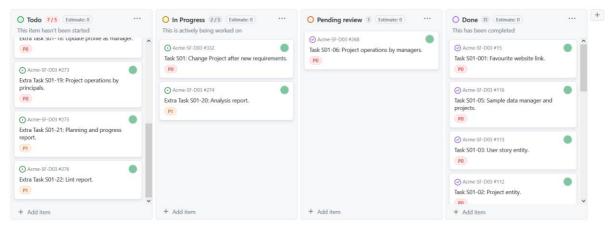

| Tasks  | Description                 | Assignees | Roles                | Planned hours | Actual hours |
|--------|-----------------------------|-----------|----------------------|---------------|--------------|
| S01-06 | Project operations by       |           |                      | 7 h.          | 7 h 18 min   |
|        | managers.                   |           |                      |               |              |
| S01-07 | User story operations by    |           |                      | 4 h.          | 6h 33 min    |
|        | managers.                   |           |                      |               |              |
| S01-08 | Manager dashboard           |           |                      | 2 h           | 2h 21 min    |
|        | operations.                 |           | Manager              |               |              |
| S01-17 | Become a manager            | Rafael    | Analyst<br>Developer | 2 h           | 28 min       |
| S01-18 | Update profile as manager.  |           |                      | 45 min        | 22 min       |
| S01-19 | Project operations by any.  |           |                      | 3 h           | 27 min       |
| S01-20 | Analysis report.            |           |                      | 1 h 30 min    | 1h 22 min    |
| S01-21 | Planning and progress       |           |                      | 1h 10 min     | 54 min       |
|        | report.                     |           |                      |               |              |
| S01-22 | Lint report.                |           |                      | 2 h           | 1h 07 min    |
| S01-   | Solve problems first follow |           |                      | -             | 2 h 27 min   |
| Other1 | up.                         |           |                      |               |              |

#### Screenshots

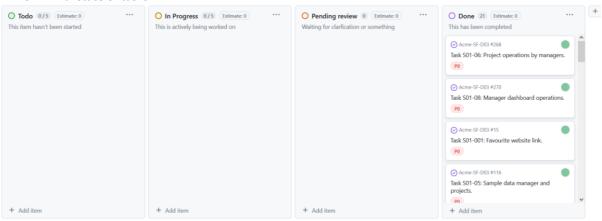

#### 1. Initial state of tasks

#### 2. Intermediate state of tasks

#### 3. Final state of tasks

#### Planned budget per role

| Role      | Planned time | Personnel costs (€/h) | Total cost (€) |
|-----------|--------------|-----------------------|----------------|
| Manager   | 1 h 30 min   | 30.00                 | 45.00          |
| Analyst   | 1 h 50 min   | 30.00                 | 54.90          |
| Developer | 21 h 15 min  | 20.00                 | 425.00         |
| Tester    | 0 h          | 20.00                 | 0              |
| Deployer  | 0 h          | 20.00                 | 0              |
| TOTAL     |              |                       | 524.90         |

Amortization = (equipment value + residual value) / useful life =

= (1300 - 0.35\*1300) / 3 = 845 / 3 = 281.67 €

Without sale expectancy, the residual value would be 0 and the amortization, 433.33 €.

For the equipment, only the computer has been considered.

The monthly amortization considering sale expectancy plus the sprint personnel cost would sum up to 548.37 €.

#### **Progress**

#### Actual budget

| Role      | Actual time | Personnel costs (€/h) | Total cost (€) |
|-----------|-------------|-----------------------|----------------|
| Manager   | 48 min      | 30.00                 | 24.00          |
| Analyst   | 50 min      | 30.00                 | 25.00          |
| Developer | 23 h 29 min | 20.00                 | 469.83         |
| Tester    | 0 h         | 20.00                 | 0              |
| Deployer  | 0 h         | 20.00                 | 0              |
| TOTAL     |             |                       | 518.83         |

Amortization = (equipment value + residual value) / useful life = = (1300 + 0.35\*1300) / 3 = 845 / 3 = 281.67 €

This amortization is calculated for a span of 3 years. For the equipment, only the computer has been considered.

The monthly amortization considering sale expectancy plus the sprint personnel cost would sum up to 542.30 €.

#### **Budget** comparison

| Role      | Planned<br>time | Actual<br>time | Time<br>difference | Planned<br>cost (€) | Actual<br>cost (€) | Difference<br>of cost (€) | Planned<br>amortization<br>(€) | Actual amortization (€) | Amortization difference (€) |
|-----------|-----------------|----------------|--------------------|---------------------|--------------------|---------------------------|--------------------------------|-------------------------|-----------------------------|
| Manager   | 1 h 30<br>min   | 48 min         | - 42 min           | 45.00               | 24.00              | - 21.00                   |                                |                         |                             |
| Analyst   | 1 h 50<br>min   | 50 min         | - 1 h              | 54.90               | 25.00              | - 29.90                   | 281.67                         | 281.67                  | 0.00                        |
| Developer | 21 h 15<br>min  | 23 h 29<br>min | + 2 h 14<br>min    | 425.00              | 469.83             | + 44.83                   |                                |                         |                             |
| Tester    | 0               | 0              | + 0 h              | 0                   | 0                  | +0                        |                                |                         |                             |
| Deployer  | 0               | 0              | + 0 h              | 0                   | 0                  | +0                        |                                |                         |                             |

#### Conflicts

No real conflict has arisen in this delivery. If any, I had to wait for a clarification of the lint report for some days. Even if not a conflict, it would be interesting to mention that a new task was added some days after the beginning of the sprint to solve some problems with the previous delivery.

#### Progress record

Rafael Castillo Cebolla – Student #1, at 22/04/2024.

To this date, I have correctly fulfilled all my tasks, including this one, within the assigned time. I've analysed the tasks, tracked my time and measured my cost. I believe I have done a good job playing all three involved roles for the individual delivery.

Acme Software Factory

Let us analyse my individual tasks based on the performance metrics defined in the group charting report. It must be noted that since the same person plays all roles here, it would not have been any practical to create an analysis (QA) after I finish each task to then review them myself again, something I must have done (and I have) before deeming it done in first place. However, if after considering a task I become aware of a mistake, I would create a new revision task to solve it.

- Performance percentage: Performance = CompletedTasks / TotalTasks \* 100 = 10/10
   \* 100 = 100
- Number of serious revision tasks: 0.

The results show a great performance in this delivery. Let's keep up the work.

#### Conclusions

It has been a very positive third delivery. All work has been done in time and well. The first features have naturally taken more time than the following ones. I am ready for the last delivery and eager to keep on improving and keep aiming for the maximum grade, as all my group partners.

## Bibliography

Intentionally blank.
